Join the EBS Family!

More about us and the Electron Microscopy division of our business:

For over 50 years, we have specialized in manufacturing filaments, cathodes, apertures and other critical components for most electron beam applications. These include electron microscopy; semiconductor inspection, defect revue and metrology; e-beam welding; vacuum deposition; ion implant, x-ray and more. From standard electron microscope filaments to highly specialized beam sources and components, we consistently deliver the Products and technology our customers need to excel in their markets.
